Please call to discuss private classes at your place of business.

PRIVATE CLASSES MAY BE SCHEDULED BY REQUEST (Minimum enrollment required, group pricing available)

■ RI Analytical Laboratories, Inc. - Training Class Descriptions ■

OSHA Asbestos Awareness – A 2hr awareness class that fulfills the AHERA and ASHARA annual requirements of custodial and janitorial staff who work within facilities that contain asbestos containing materials but are not involved in the removal and repair of asbestos.

OSHA Lead Awareness – A 2hr awareness class designed to inform attendees of the health hazards, Personal Protective Equipment and risks associated when working with Lead. Note: This is **not** a RRP class.

OSHA Silica Dust Awareness - A 2hr awareness class designed to inform attendees of the health effects and risks associated working when with Silica related trades as well as environmental monitoring procedures. A new 4 hour competent person class designed to cover the requirements for Competent Person identified in the OSHA regulation.

ASBESTOS TRAINING COURSES ARE (RI DOH/MA DOLS/ US EPA) CERTIFIED

Contractor/Supervisor Training - This course prepares the participant to: direct an asbestos abatement project, explore abatement options, review specifications and project designs, review building systems, and interpret data from asbestos abatement. In addition to the hands-on containment preparation training presented in the course, supervisors extensively review pertinent asbestos-related regulations, review management checklists, examine elements of effective supervision and supervisory documentation responsibilities.

Worker/Handler – This refresher course reviews proper asbestos abatement procedures and according to all prevailing federal and state standards. Training segments for containment construction, erection of decontamination chambers, glove bag operations, use and care of respirators, recognition of tools, familiarity with equipment including HEPA vacuums and air sampling devices. * = *initial course training not offered for this discipline*

Inspector - The purpose of this course is to equip and certify the participant to conduct inspections for suspect asbestos materials, to collect samples, and to assess the condition of the material based on EPA protocols and to satisfy OSHA related employee exposure criteria.

Management Planner - This course provides graduates of the Building Inspector course with the knowledge and practical experience to create EPA required management plans for schools, and EPA recommended plans for general industry, commercial and public buildings. *Class prerequisite requires proof of prior Asbestos Inspector certificate.*

Competent Person – This course is geared towards facilities and maintenance workers, plumbers, electricians, carpenters, and others who perform operations that disturb less than 3 square feet or 3 linear feet (OSHA Class III) of asbestos containing material; or whose work takes them into asbestos regulated areas.

Project Designer Refresher – This refresher course reviews data interpretation of building inspections for suspect asbestos materials, laboratory analysis of samples, building systems review, and all applicable asbestos-related regulations in order to develop a design for an asbestos abatement project and/or create Alternative Work Practices and associated State abatement plan applications. * = *initial training course not offered for this discipline*

Project Monitor – This refresher course reviews the needs and requirements of safe work practices for asbestos abatement including: regulatory compliance; containment construction and maintenance of integrity; work practices and adherence to contract specifications; visual inspections of abatement containments and adjacent area; air testing for employee exposure and ambient sampling for exposure assessments.

LEA Designated Person Training/Asbestos Coordinator – Are you new to a facility or have been assigned as the Designated Person in an AHERA school, public or commercial building? This one day overview provides insight into basic information about asbestos history, uses and health effects, response actions, and how to address asbestos concerns.
